JOURNAL OF AGRICULTURAL RESEARCH

VOL. XXX WASHINGTON, D. C., JANUARY 1–JUNE 15, 1925

CONTENTS

	Page
A Study of Variability in the Burt Oat. FRANKLIN A. COFFMAN, JOHN H. PARKER, and KARL S. QUISENBERRY (9 plates; 1 text figure)	1
The Composite Life History of *Puccinia podophylli* Schw. H. H. WHETZEL, H. S. JACKSON, and E. B. MAINS (4 plates)	65
Effect of Height of Chipping on Oleoresin Production. ELOISE GERRY (3 plates; 1 text figure)	81
The Effect of Bacterial Numbers on the Nodulation of Virginia Soy Beans. ALFRED T. PERKINS	95
Classification of Scale Insects of the Subfamily Ortheziinae. HAROLD MORRISON (2 plates; 42 text figures)	97
A Test of Raw Onions in the Diet as a Control Measure for Worms in Dogs. M. C. HALL, J. E. SHILLINGER, and E. B. CRAM	155
Study of the Life History and Ecological Relations of the Smut of Maize. ALDEN A. POTTER and LEO E. MELCHERS (3 plates; 2 text figures)	161
Further Studies on the Toxicity of Juice Extracted from Succulent Onion Scales. J. C. WALKER, CARL C. LINDEGREN, and FREDA M. BACHMANN (3 text figures)	175
Borax as a Disinfectant for Citrus Fruit. WILLIAM R. BARGER and LON A. HAWKINS	189
The Occurrence of Copper, Manganese, Zinc, Nickel, and Cobalt in Soils, Plants, and Animals, and Their Possible Function as Vital Factors. J. S. MCHARGUE	193
Anatomy of the Vegetative Organs of Sugar Cane. ERNST ARTSCHWAGER (25 plates; 8 text figures)	197
Regarding the Possible Adaptation of Soy Bean Radicicola to a Specific Host Variety. ALFRED T. PERKINS	243
Sowing and Planting Season for Western Yellow Pine. W. G. WAHLENBERG (2 text figures)	245
The Quantitative Determination of Xanthophyll by Means of the Spectrophotometer and the Colorimeter. F. M. SCHERTZ (5 text figures)	253
Contribution to the Chemistry of Decomposition of Proteins and Amino Acids by Various Groups of Microorganisms. SELMAN A. WAKSMAN and S. LOMANITZ (1 text figure)	263
A Biometric Comparison of the Urediniospores of *Cronartium ribicola* and *Cronartium occidentale*. REGINALD H. COLLEY (4 text figures)	283
Root Rot of Peas in the United States Caused by *Aphanomyces euteiches* (n. sp.). FRED REUEL JONES and CHARLES DRECHSLER (6 plates; 1 text figure)	293
Direct Inoculation of Coniferous Stems with Damping-Off Fungi. ANNIE RATHBUN-GRAVATT (2 text figures)	327
Root Rot of the Grapevine in Missouri Caused by *Clitocybe tabescens* (Scop.) Bres. ARTHUR S. RHOADS (7 plates)	341
Control of Mycelial Neck Rot of Onion by Artificial Curing. J. C. WALKER (2 plates)	365
Relative Susceptibility of Selections from a Fulghum-Swedish Select Cross to the Smuts of Oats. GEORGE M. REED and T. R. STANTON (4 plates)	375
A Comparison of Direct and Indirect Calorimetry in Investigations with Cattle. MAX KRISS	393
The Life History of *Pilacre faginea* (Fr.) B. and Br. C. L. SHEAR and B. O. DODGE (2 plates)	407
Toxicity Studies with Dicyanodiamide on Plants. F. E. ALLISON, J. J. SKINNER, and F. R. REID (2 plates; 3 text figures)	419
Studies on the Single-Injection Method of Vaccination as a Prophylactic Against Rabies in Dogs. HARRY W. SCHOENING	431

Page

The Strawberry Root Louse in Tennessee. S. MARCOVITCH (3 plates) 441

The Effect of Sulphur and Gypsum on the Fertility Elements of Palouse Silt Loam. LEWIS W. ERDMAN (1 text figure) 451

Phytophthora Rot of Pears and Apples. DEAN H. ROSE and CARL C. LINDEGREN (2 plates) 463

Some Physical and Chemical Properties of Carotin and the Preparation of the Pure Pigment. F. M. SCHERTZ (1 text figure) 469

The Life History of the Texas Root Rot Fungus, *Ozonium omnivorum* Shear. C. L. SHEAR (1 plate; 2 text figures) 475

The Distribution of the Alfalfa Weevil (*Phytonomuspost icus* Gyll.) A Study in Physical Ecology. WILLIAM C. COOK (12 text figures) 479

Infection and Dissemination Experiments with Degeneration Diseases of Potatoes. Observations in 1923. E. S. SCHULTZ and DONALD FOLSOM (10 plates; 1 text figure) 493

Studies of Spore Dissemination of *Venturia inaequalis* (Cke.) Wint. in Relation to Seasonal Development of Apple Scab. C. N. FREY and G. W. KEITT (1 text figure) 529

Relation Between Mortality of Trees Attacked by the Spruce Budworm (*Cacoecia fumiferana* Clem.) and Previous Growth. F. C. CRAIGHEAD (5 text figures) 541

Review of the Nematode Genera Syngamus Sieb. and Cyathostoma E. Blanch. EDWARD A. CHAPIN (4 plates) 557

Cooperia bisonis, A New Nematode from the Buffalo. ELOISE B. CRAM (7 text figures) 571

Some Physical and Chemical Properties of Xanthophyll and the Preparation of the Pure Pigment. F. M. SCHERTZ (1 text figure) 575

Physiological Studies on Cereals. III. The Occurrence of Polypeptides and Amino Acids in the Ungerminated Maize Kernel. S. L. JODIDI 587

Relation of Weather Conditions to the Spread of White Pine Blister Rust in the Pacific Northwest. L. H. PENNINGTON (2 text figures) 593

The Construction of Taper Curves. FREDERICK S. BAKER (10 text figures) 609

Psilocybe as a Fermenting Agent in Organic Débris. CHARLES THOM and ELBERT C. LATHROP 625

Relative Susceptibility of Citrus Varieties to Attack by *Gloeosporium limetticolum* (Clausen). HARRY R. FULTON 629

Reforestation by Seed Sowing in the Northern Rocky Mountains. W. G. WAHLENBERG (2 text figures) 637

Two Imported Egg Parasites of the Gipsy Moth, *Anastatus bifasciatus* Fonsc. and *Schedius kuvanae* Howard. S. S. CROSSMAN (11 text figures) 643

New Nematodes from North American Mammals. EDWARD A. CHAPIN (4 text figures) 677

Further Investigations of Infectious Equine Anemia in Nevada. LEWIS H. WRIGHT (12 text figures) 683

The Use of Liability Ratings in Planning Forest Fire Protection. W. N. SPARHAWK (36 text figures) 693

Ascaridia lineata, a Parasite of Chickens in the United States. BENJAMIN SCHWARTZ (18 text figures) 763

Some Laboratory Methods for Parasitological Investigations. MAURICE C. HALL and ELOISE B. CRAM (1 text figure) 773

Some Lepidopterous Larvae Resembling the European Corn Borer. WILLIAM O. ELLIS (2 plates) 777

The Influence of Temperature of the Infection and Decay of Sweet Potatoes by Different Species of Rhizopus. J. I. LAURITZEN and L. L. HARTER (9 text figures) 793

Time of Year to Plant Mother Beets for Seed Production. DEAN A. PACK (4 plates) 811

The Soil Mulch in the Absorption and Retention of Moisture. M. A. MCCALL (6 text figures) 819

Fundamentals for Taxonomic Studies of Fusarium. H. W. WOLLENWEBER, C. D. SHERBAKOFF, O. A. REINKING, HELEN JOHANN, and ALICE A. BAILEY (1 text figure) 833

The Ham Beetle, *Necrobia rufipes* de Geer. PEREZ SIMMONS and GEORGE W. ELLINGTON (2 plates; 1 text figure) 845

Studies on Conformation in Relation to Milk Producing Capacity in Cattle. IV. The Size of the Cow in Relation to the Size of Her Milk Production. JOHN W. GOWEN (1 text figure) 865

Necrosis, Hyperplasia, and Adhesions in Mosaic Tomato Fruits. MAX W. GARDNER (8 plates; 1 text figure) ... 871
Feeding Chlorinated Milk to the Albino Rat. J. W. READ and HARRISON HALE (3 text figures) ... 889
The Possibility of Sex Control by Artificial Insemination with Centrifuged Spermatozoa. JAY L. LUSH (14 text figures) ... 893
Correlated Inheritance of Botanical Characters in Barley, and Manner of Reaction to *Helminthosporium sativum*. FRED GRIFFEE (2 plates; 1 text figure) ... 915
The Relation of Sulphur to Alfalfa Production. OSCAR C. BRUCE (3 plates) 937
Carbon Trichloride as an Anthelmintic, and the Relation of Its Solubility to Anthelmintic Efficacy. MAURICE C. HALL and ELOISE B. CRAM ... 949
A Study of the Influence of Inoculation upon the Fermentation of Sauerkraut. O. R. BRUNKOW, W. H. PETERSON, and E. B. FRED ... 955
A Physiological Study of *Mucor racemosus* and *Diplodia tubericola*—Two Sweet Potato Storage-Rot Fungi. L. L. HARTER ... 961
Microorganisms in Decomposing Oysters. ALBERT C. HUNTER and BERNARD A. LINDEN ... 971
The Egg-Producing Capacity of *Ascaris lumbricoides*. ELOISE B. CRAM (6 text figures) ... 977
A Study of Essential Plant Foods Recoverable from the Manure of Dairy Cows. C. F. WELLS and B. A. DUNBAR ... 985
Physiological and Biochemical Studies on Cereals. IV. On the Presence of Amino Acids and Polypeptides in the Ungerminated Rye Kernel. S. L. JODIDI and J. G. WANGLER ... 989
Factors Affecting Reproduction of Engelmann Spruce. W. C. LOWDERMILK (6 plates) ... 995
The Rôle of the Hydrogen-Ion Concentration on the Development of Pigment in Fusaria. CHRISTOS P. SIDERIS (1 plate) ... 1011
Effect of Seeds upon Hydrogen-Ion Concentration Equilibrium in Solution. WILLEM RUDOLFS (1 text figure) ... 1021
Fusarium Resistant Cabbage: Progress with Second Early Varieties. L. R. JONES, J. C. WALKER, and JOHN MONTEITH, Jr. (2 plates) ... 1027
The Cottony Leak of Cucumbers Caused by *Pythium aphanidermatum*. CHARLES DRECHSLER (2 plates; 1 text figure) ... 1035
Comparative Studies of *Pythium debaryanum* and Two Related Species from Geranium. HARRY BRAUN (8 plates; 3 text figures) ... 1043
Variation in the Kherson Oat at Akron, Colorado. F. A. COFFMAN and T. R. STANTON (4 plates; 1 text figure) ... 1063
Relation Between Weather Conditions and Yield of Cotton in Louisiana. BRADFORD B. SMITH (1 text figure) ... 1083
Relative Susceptibility of Some Rutaceous Plants to Attack by the Citrus Scab Fungus. JOHN R. WINSTON, JOHN J. BOWMAN, and WALTER J. BACH ... 1087
Effects of Crops on the Yields of Succeeding Crops in the Rotation, with Special Reference to Tobacco. W. W. GARNER, W. M. LUNN, and D. E. BROWN (7 plates; 17 text figures) ... 1095
Some Effects of Seasonal Conditions upon the Chemical Composition of American Grape Juices. JOSEPH S. CALDWELL (13 text figures) ... 1133
Natural Reproduction after Forest Fires in Northern Idaho. J. A. LARSEN (4 plates; 3 text figures) ... 1177

ERRATA AND AUTHORS' EMENDATIONS

Page 95, Table I, third line, should be tumbler "1C" instead of "2C"; sixth line, "2C" instead of "3C"; seventh line, "3A" instead of "1A."

Page 151, first column, line 17, "Loch Katrina" should be "Loch Katrine."

Pages 190, 191, and 192. For "blue mold" read "green mold" and for "green mold" read "blue mold."

Page 249, Table V, heading for section 2, the date should be April 20, 1918, not April 20, 1917.

Page 249, the last word in the first column should be "unfavorable," not "favorable."

Page 300, line 4 of legend, change "setting of sex organs" to "setting off sex organs."

Page 300, line 6 of legend, change "470 diameters" to "940 diameters."

Page 306, delete period following "branches" in line beginning "A" in legend.

Page 310, first column, line 5, change "binmoia" to "binomial."

Page 411, first column, line 28 from the bottom, delete hyphen in "hyphae-bearing."

Page 594, Figure 1 should be reversed.

Page 775, last line of legend, "soild" should be "solid."

Page 793, first column, line 2 from bottom, "tonkinensi" should be spelled "tonkinensis."

Page 810, first column, line 2 from bottom, the second "as" should be "at."

Page 815, first column, line 13 from the bottom, second sentence, "30°" should be "20°."

Page 824, Table III, in the fourth line of figures from the bottom, ".14" under "Gain" should be a loss of that quantity.

Page 836, second column, line 18 from the bottom, "ND_1" should be "C_1D_1."

Page 837, first column, line 24, "Arachonites" should be "Arachnites."

Page 842, line 3 from the bottom, "Spicarioides" should be "Spicarioides."

Page 982, Table I, fourth column, "*a*" under Uteri should be "*a'*."

Page 990, Table I, column 5, line 2, "82.77" should be "82.70."

Page 1038, first column, line 23 from the bottom, "(Greef.)" should be "(Greeff)."

Page 1120, legend of fig. 8, line 2: "The yields generally lie between," etc. should read: "The yields after tobacco generally lie between those," etc.

Page 1150, second column, last paragraph, "The literature dealing with the chemistry of the European grape, *Vitis vinifera*, is in agreement that sucrose is never found in the mature fruit of this species." Since the proof sheets of this article were read, an article by Copeman (Copeman, P. R. v. Q. R., An investigation with some physical and chemical changes occurring in grapes during ripening. Science Bull. No. 30, Dept. Agric. Union So. Africa, 38 pp., 30 figs., 1924) has been received. Copeman analyzed four varieties of *Vitis vinifera*, Red and White Hanepoot, Barbarossa, and Flaming Tokai, at weekly intervals, beginning four weeks before ripening began and continuing three weeks after the fruit was fully ripe. Sucrose was present in all stages and increased in amount after full ripeness was attained. This is apparently the first report of the presence of sucrose in fully ripe *Vitis vinifera*.

Page 1161, second column, line 7 from the bottom, "as soon as" should read "as some."

Page 1161, second column, last line, add "days" to "one-half the number of."

Page 1166, first column, line 6 from the bottom, "that that" should read "that the."
